Don't turn it upside down

Checking of completeness

in
the language you demand

country-specific

in given place

4. Observe safety warnings

3. Please note all product documentations like:

operating
manual

assembly instructions

Preparation

5. When lifting the climber don't carry it over the slats. Don't press the sides together. Please carry the climber every time in closed position.

6. Without prior agreement, it is not allowed to open the upper floor of the climber.

7. It is very important to check if the dimensions of the climber are compatible to the dimensions of the place for the climber.

Installing CLIMBER

8. Put up the climber on the worktop. Be careful by carrying it.

9. Align the climber in all directions. Ensure that the cabinet is not warped, jammed or compressed. A warpage of the climber can lead to the loosening of the slats or to a malfunction of the climber.

Installing CLIMBER

10. Fix the climber. Also here we have to ensure that the cabinet is not warped, jammed or compressed.

11. Before initializing the climber please remove all adhesive films and also all protection films on adjacent parts. Don't use knives.

Start-up procedure

12. Initialising the Climber.

1. Connect it to electricity
2. Wait 30 Sec.

13. The climber is ready for using. It is not needed to program it.

Overvoltage protection

If you have installed kitchens in apartments that are not inhabited, it is very important to unplug the climber from the electricity, after the initialization is completed.

Don't switch the main electricity of the apartment, or the buildings on or off, until unplugging the climber from electricity.

Before unplugging, please close the climber and wait until the closing procedure is completed.

Turn off main electricity switch:

1. Unplug the Climber

2. Switch electricity off

Turn on main electricity switch:

1. Switch electricity on

2. Plug in the Climber

If the sides are narrowed, you can easily widen them with a plastic wedge:
